

EXCEL S, Chlorination systems with salt electrolysis

Περιγραφή

Electrolysis disinfection systems, pool water solution with the addition of common salt in an amount of 0.4 to 0.7% (per 100m³, 400 to 700 kgr common salt).

Titanium electrodes, self-cleaning with programmable polarity change.

The EXCELL S type refers to standard units with automatic ON-OFF operation via the filtration pump and includes a central unit and an electrode cell.

Minimum pool water supply in electrode cell, 10m³ / hour per cell
