

## AUTOMATIC ROLLER SHUTTER COVER

### Περιγραφή

All **ROLLER SHUTTER profiles** are sealed watertight with endcaps and therefore float on water surface. They offer protection for children, pets and adults as the roller shutter **cannot sink** if someone walks on it. They are connected through an open spigot (double hook) and socket (hook chamber). The cover is driven electrically and its motor is placed either over the edge of the pool (shutter **above ground**) or installed under the water surface (**inground** shutter).

#### **PVC ROLLER SHUTTER with glued endcaps:**

It is a very durable three-chamber profile made of PVC-UV stabilized. The profiles have glued endcaps. The rounded upper surface of the profile facilitates cleaning. The combination of the profiles in the form of a double hook increases stability and safety of the covers. The endcaps are made in profile colors and a special gap in the endcap makes it easy to disassembly the profiles.

**WARNING:** PVC profiles must not be exposed to direct sunlight in the packaging. There is a possibility of deformation due to the lack of water cooling which is not covered by the warranty.

**PVC ROLLER SHUTTER is available in the following colors:** White, Light grey, Dark grey, Vanilla, Blue.

#### **PC (POLYCARBONATE) ROLLER SHUTTER:**

This polycarbonate profile is a triple extrusion slat with an additional protective layer containing UV absorbers that counteract the aging and yellowing of the profiles and gives impact and scratch resistance. The rounded upper surface of the profile facilitates cleaning. The connection in the form of a double hook increases the stability and

security of the cover. It has an anti-algae perforation at intervals of 18cm in the hook compartment. The perforations allow the compartment to be washed away from dirt and algae construction in hard-to-reach places. A special gap in the endcap enables easy removal of the profiles.

**WARNING:** With transparent profiles, the air temperature difference may cause condensation and fogging inside the chamber. This does not limit the functionality of the cover and is not a reason for complaint.

**USE OF SOLAR PROFILES:** When the shutter is closed, the pool filter pump should be on all the time, so that the heated water under the cover can be distributed.

**PC ROLLER SHUTTER is available in the following colors:** Transparent total, Transparent blue, Solar blue, Solar transparent, Solar silver, Solar gold.

#### **PC (POLYCARBONATE) ANTI-ALGAE ROLLER SHUTTER:**

The polycarbonate ANTI-ALGAE profile is a triextrusion slat with 4 closed chambers and an opaque double-hook chamber. It has an additional protective layer of UV absorbers that counteract the aging and yellowing and give the profile a high impact and scratch resistance. This antialgae profile has an opaque double hook and openings for water flow in the endcaps. The double hook gives the profile a strong and stable adhesion. With the help of the gap in the endcaps, the profiles can be easily disassembled for service work. This profile offers the best possible protection against algae and highly efficient heat recovery.

**USE OF SOLAR PROFILES:** When the shutter is closed, the pool filter pump should be on all the time, so that the heated water under the cover can be distributed.

**PC ANTI-ALGAE ROLLER SHUTTER is available in the following colors:** Solar blue, Solar silver.

**All roller shutter profiles have a two-year warranty.**
